## Warehousing

The pharmaceutical distribution companies are the vital link in the healthcare system, helping pharmacies, hospitals and other healthcare providers keep their shelves stocked with the medications and products that patients need every day. Super Specialities Pharma Warehousing and Logistic Pvt Ltd extensive storage capabilities ensure clients' valuable stock is handled with the utmost care and attention: our stock accuracy of over 99.99%, driven by some unique processes, demonstrates that SSP treats our Client's stock as our own.

**Our fully regulated facilities can cater for all types of storage:**

- Ambient (up to 24°C)
- Chill (2-8°C) walk in cold room (Cold Chain Management)
- Controlled Drugs (CD's) & hazardous drugs
- Medical sample storage
- Promotional Material Storage

With strategically located depot located at Mumbai, SSP offer you the flexibility you need for your product storage. You can be assured that your stock is being well looked after.

**Key Facts about SSP:**

- Storage Capabilities: ambient, chill, controlled drug
- Product Capabilities: Specials, Imports.
- Refrigerated (2-8°C) and temperature controlled storage capabilities
- 100% Air conditioned
- Secure site with controlled access
- Validated cold chain packaging
- Management of export certification requirements
- Temperature controlled and customised transit solutions through our logistics partners
- Dedicated Customer Services

Whether you're a large blue chip organisation or a small business start-up our processes are always consistent, Standard Operating Procedure (SOP) driven, all procedures and processes are designed to ensure stock integrity and information accuracy

## Cold Chain Management

Certain lifesaving medicine needs to be kept under the required temperature. Our cold chain management ensures that the material is in the designated temperature range.

For any given time of the year, the distribution environment can vary markedly from country-to country and within countries. The environment will also change significantly according to the season and other variables, such as the mode of transportation. So if “cold chain management” is not maintained properly then some possible unwanted change can occur like-

- Physical change: Suspension may change to physical characteristics (for example, particle size) as a result of temperature fluctuation.
- Chemical change: Less soluble components may crystallize out of solution at low temperature.

## Distribution

For cancer patient's days — even hours — are critical. Delaying their treatment because of issues with product availability or breaks in the inventory management process doesn't just impact the bottom line; it impacts patients' lives.

With more than 600 anti-cancer products available, Super Specialities Pharma Warehousing and Logistic Pvt Ltd (SSPWL) is able to provide the resources essential for effective patient care. With the ability to accept online orders and deliver these products overnight, (SSPWL) can provide these resources when they are needed most.

SSPWL is approved to carry out distribution following Good Distribution Practices (GDP). We maintain our high standards by following detailed Standard Operating Procedures (SOPs) throughout our distribution processes to ensure we're not only meeting standards but also our own and our clients' high standards set by years of healthcare logistics experience.

We can also support clients with export, with Known Consignor status we're able to prepare orders to specification with the appropriate documentation, and then liaise with global shippers for the exportation of client stock.

We have an in depth understanding and collaborative relationships with the following channels:

- Hospitals
- Pharmacy multiples
- Clinical trial deliveries
- Wholesalers
- Retailers
- Patients

## Drug Shortage Management

Shortages of essential chemotherapy and supportive medicines are becoming a routine part of oncology practice. Thus, it is now crucial that the management of shortages be adopted as standard of care guidelines to ensure that patients across the health care system receive appropriate therapy for their disease. Despite the best efforts of pharmaceutical companies, the supply of medicines into markets in which they are licensed can be interrupted due to unforeseen production, supply chain or regulatory circumstances. When this happens, the key challenge for the pharmaceutical company is to ensure that the impact of this shortage on a patient's wellbeing is minimised. This can be an especially sensitive and difficult challenge if there are patients for which there are no other clinically viable licensed alternatives available in their home market.

It is this scenario that Super Specialities Pharma Warehousing and Logistic Pvt Ltd (SSPWL) works with pharmaceutical companies to quickly source an alternative medicine from outside the affected market and make it available to the patients impacted upon by the shortage.

All aspects of this service can be fully managed by us, from the identification of alternative medicines to the planning and delivery within the give time frame to ensure ongoing demand is met. All this will be undertaken in strict compliance to all of the applicable regulations governing the sourcing, importation and supply of a medicine which is unlicensed in the affected market. This service can remain in place for as long as is required to re-establish the reliable supply of the medicine.

With a temporary supply solution in place, the pharmaceutical company can focus time and resource into resolving the supply issue in the safe knowledge that patients' ongoing treatment needs have been fully satisfied.

## Named Patient Supplies

Healthcare professionals can be faced with the challenge of trying to treat patients who need a drug that is not locally available to them. The drug may not be launched in their territory, be discontinued, or is simply in short supply. In these instances, physicians and pharmacists need to source and dispense patient specific, difficult-to-obtain treatment (often referred to as named patient Supplies), often on an urgent basis.

Super Specialties has the expertise and infrastructure to source these named patient medicines from all over the globe, and get them quickly and safely to the patients that need them.
